

4 Motor Adjustable Bed Mechanism

Offset against the additional cost is the benefit of the enhanced functionality.

Unlike the standard 5-part mechanism which is controlled by two motors housed in one unit the 4 -motor mechanism has two separate units each containing two motors.

Additional buttons on the hand control allow the user to raise the back section to the desired position and then independently raise and lower the neck (pillow) section.

Likewise, the upper leg can be raised and then the lower leg and feet can be adjusted to the perfect position. There are numerous medical and comfort benefits to this system.

Approximate dimensions of the mechanism framework

2'6" is made 73.5cm x 1960mm x 100mm +/- 5mm

3' is made 89 cm x 1960mm x 100mm +/- 5mm

3'6" is made 100 cm x 1960mm x 100mm +/- 5mm

4' is made 120 cm x 1960mm x 100mm +/- 5mm

The prices shown below are an **add on** (price difference) to the bed prices on our website

Width	2'6" (73cm)	3' (89cm)	3'6" (100cm)	4' (120cm)
