

Plug in the hand control

Loop the cable through the bridge, hook it over the anchor.

Pull back on the cable. Slide the two motor covers off.

mechanism against a wall

You will find an illustration of the head end on the motor

The head end of the mechanism can be identified by the short neck section

Position the twin motor over the hooks of the drive bars.

Push hard. You will hear a click when it locates into position.

Slide the motor covers back on. They will not fit if the motors are not pushed back on hard enough.
